StoryCast Documentation

Project structure, accessibility checklist and setup instructions

Author: Divine Mutesi

1. Overview

StoryCast is an accessible three-page microsite for audio and video storytelling, built with vanilla HTML, Sass and CSS. It uses no frameworks and no JavaScript.

2. Project structure

```
storycast/
  index.html - Home page
  about.html - About & Access page
  story/where-learning-begins.html - Story detail page
  sass/ - Sass source (tokens, base, layout, components, main.scss)
  css/ - compiled main.css and source map
  assets/media/ - images, audio, video, WebVTT captions
  assets/transcripts/ - plain-text transcript
  README.md
```

File	Role
sass/_colors.scss, _typography.scss, _spacing.scss	Design tokens: colours, type scale, spacing, radius, breakpoints
sass/_base.scss	Cascade layer order, reset, global styles, focus styles, skip link, .sr-only
sass/_layout.scss	Header, navigation, footer, hero, sections, page grids
sass/_components.scss	BEM components: media-card (container query), btn, media-player, transcript, access-list, breadcrumb, tag
sass/main.scss	Entry file that @use-s every partial

3. Pages

Page	Description
Home	Hero with calls to action, a featured story, and a responsive grid of recent stories.
Story detail	Breadcrumb, story header, audio player with figcaption, photo figures, captioned library video, scrollable transcript, related stories and an accessibility summary in a sidebar.
About & Access	Mission statement, six accessibility features, the team and approach, and numbered steps for engaging with the content.

4. Styling approach

- **Sass:** partials with design tokens as variables, compiled to css/main.css (compressed) with a source map.
- **BEM naming:** block__element--modifier, for example .media-card__title and .btn--primary.
- **Cascade layers:** reset, base, layout, components, utilities, declared once in _base.scss.

- **Grid and Flexbox:** Grid for page and card layouts, Flexbox for header, navigation, card bodies and metadata rows.
- **Container query:** .card-wrapper sets container-type: inline-size with the name card, and .media-card changes from a stacked to a horizontal layout when its container reaches the configured width.
- **Responsive breakpoints:** 480 px, 768 px and 1024 px, using relative units and fluid type via clamp().

5. Accessibility checklist

Requirement	How it is met	Where
Semantic structure	header, nav, main, article, section, aside, figure, figcaption, footer, time; one h1 per page with ordered headings	All pages
Skip link	First focusable element, jumps to #main-content, visible on focus	All pages
Landmark labelling	Two navs distinguished by aria-label; sections use aria-labelledby	All pages
Current page	aria-current="page" on the active navigation link	All pages
Captions	video element with a track (kind=captions, default) pointing to a WebVTT file	Story page
Transcripts	Full inline transcript in a focusable scrollable region, plus a plain-text transcript in assets/transcripts	Story page, assets
Media descriptions	figcaption linked to each player with aria-describedby	Story page
Media fallback	Fallback text and transcript link inside audio and video elements	Story page
Alt text	Descriptive alt text on all informative images, with width and height set	Home, Story
Colour contrast	All text pairs 4.5:1 or higher (white on background 18.1:1, muted text 6.3:1 or higher, button 4.9:1)	Sass tokens
Focus visibility	3 px orange :focus-visible outline with offset on all interactive elements	_base.scss
Keyboard use	All controls are native elements; no keyboard traps; visible focus order follows the DOM	All pages
Language	lang="en" on every page	All pages
Responsive and zoom	Relative units, fluid layouts, content reflows without horizontal scrolling	All pages

6. Running locally

Requirements: a modern browser. Node.js is only needed to recompile Sass.

View the site

```
git clone https://github.com/divine150-coder/storycast.git
cd storycast
Open index.html in a browser (double-click, or serve the folder with any static server).
```

Edit and recompile Sass

```
npm install -g sass
sass sass/main.scss css/main.css --style=compressed

# or watch for changes while developing
sass --watch sass/main.scss css/main.css
```

7. Media and credits

Photos, videos and the audio narration were made by the author at and about Isunzu Yacu Village and Bigogwe. Story text, transcript and captions were written for this project. Font: Inter (Google Fonts). Built by Divine Mutesi.
